

Nordea 1 M-shares

August 2023

Looking for regular income ... and returns? There is a better option than cash or sovereign bonds

Nordea 1 M-shares can help you reach your total return goals¹

With the recent jump in interest rates, investors looking for income are increasingly returning to cash, deposits or sovereign bonds. Such a move, however, denies them the **total return opportunities** offered by other fixed income, equities or multi asset solutions.

With the **M-shares**, Nordea Asset Management actively approaches this issue by now offering **monthly distributing share classes**.

- Regular monthly cash flows
- Daily liquidity
- Continuous participation in long-term return potential¹

M-shares are available for a number of Nordea 1 funds across various asset classes and **will fully distribute the income²** produced by the investment, whether bonds, equities or multi-asset solutions. This will ensure that **investors' income needs are met** while still enjoying the **longer-term benefits of investing** in these assets.

By investing in deposits or sovereign bonds investors may be overlooking the **higher yields now offered by other asset classes**. For example, the Nordea 1 – European High Yield Bond Fund is currently offering a distributed yield of 6.8%³, while the Nordea 1 – European Cross Credit Fund offers 5%.³

Equities also offer robust dividend yields in addition to the capital growth generated by the underlying businesses. As an illustration, the Nordea 1 – European Stars Equity Fund is currently yielding 3.6%³ and the Nordea 1 – Global Sustainable Listed Real Assets Fund is yielding 4.2%.³

For investors in our **multi-asset solutions**, which do not have a specific income stream, we will **distribute the fund's expected return**.^{1, 2, 3, 4}

The **M-shares** open new possibilities for investors who are looking for an investment with daily liquidity to benefit from regular income while continuing to participate in the capital returns offered by their investments.

Nordea 1 – Stable Return Fund will pay out the expected return of the fund, effectively turning capital growth into income for M-share holders.^{3, 4}

In a negative environment, the monthly distribution income accrued in the M-shares may be taken from the capital. This may reduce capital and constrain future capital growth. 1) There can be no warranty that an investment objective, targeted returns and results of an investment structure is achieved. 2) Equity and Fixed Income funds will fully distribute the dividend/ coupon income generated by the fund. Multi Assets solutions will distribute the expected return of the fund + the relevant currency's 1M cash return. 3) As at 31.07.2023. **The performance represented is historical; past performance is not a reliable indicator of future results and investors may not recover the full amount invested. The value of your investment can go up and down, and you could lose some or all of your invested money.** 4) Please be aware that expected return may vary from actual delivered fund return, and that your capital may be reduced by regular monthly payouts.

Overview of main risks*

Main risks	Fixed income funds	Equity funds	Multi asset funds
ABS/MBS risk: Mortgage-backed and asset-backed securities (MBSs and ABSs) typically carry prepayment and extension risk and can carry above-average liquidity risk.			X
Credit risk: A bond or money market security, whether from a public or private issuer, could lose value if the issuer's financial health deteriorates.	X		X
Derivatives risk: Small movements in the value of an underlying asset can create large changes in the value of a derivative, making derivatives highly volatile in general, and exposing the fund to potential losses significantly greater than the cost of the derivative.	X	X	X
Prepayment and extension risk: Any unexpected behaviour in interest rates could hurt the performance of callable debt securities (securities whose issuers have the right to pay off the security's principal before the maturity date).	X		X
Emerging and frontier markets risk: Emerging and frontier markets are less established, and more volatile, than developed markets. They involve higher risks, particularly market, credit, legal and currency risks, and are more likely to experience risks that, in developed markets, are associated with unusual market conditions, such as liquidity and counterparty risks.		X	X
Securities handling risk: Some countries may restrict securities ownership by outsiders or may have less regulated custody practices.		X	X
Depository receipt risk: Depository receipts (certificates that represent securities held on deposit by financial institutions) carry illiquid securities and counterparty risks.		X	X
Taxation risk: A country could change its tax laws or treaties in ways that affect the fund or shareholders.		X
